“COLING stresses the importance of multilinguality”

(COLING 2012 Submission FAQ)

- According to Internet World Stats, the Web is no longer dominated by the English language^[1]
- The digital turn and the advancing globalization raise a strong demand for multilingual applications (MT, CLIR,...)
- These applications require multilingual knowledge
- **Where to find such knowledge?**

[1] See <http://www.internetworldstats.com/stats7.htm> (2012-11-28)

Finding Multilingual Lexical Knowledge

(Machine-readable) Dictionaries?

- Only weakly structured
- Often not freely available

Multilingual Wordnets?

- EuroWordNet, MultiWordNet,... have small coverage
- English-German ILI contains only 16,347 synsets

Wikipedia?

- Information mostly for nouns
- No linguistic knowledge, such as word usage notes

Wiktionary

- Freely available, high coverage, all parts of speech

Disambiguation of Relations

The image shows a screenshot of the Wiktionary website with several annotations. A central blue box labeled "Automatic Disambiguation" has red arrows pointing to various parts of the page:

- Top-left:** A red box highlights the definition "8. (transitive) To exhibit (an object)." from the "hang" entry.
- Top-right:** A red box highlights the first definition of "exhibit": "1. (transitive) To display or show (something) for others to see, especially at an exhibition or contest. He wanted to exhibit his baseball cards." This definition is marked with a green checkmark. The second definition, "2. (transitive) To demonstrate. The players exhibited great skill.", is marked with a red X.
- Bottom-left:** A red box highlights the synonym "(exhibit): exhibit, show" from the "hang" entry.
- Bottom-right:** A red box highlights the German entry "German: ausstellen (de)" from the "ausstellen" entry.
- Bottom-right (ausstellen entry):** A red box highlights the first meaning: "[1] zur Schau stellen", marked with a green checkmark. The second meaning "[2] Bescheinigung etc. ausfertigen" and the third meaning "[3] abschalten" are marked with red X's.

Red question marks are placed near the arrows pointing to the "exhibit" and "ausstellen" entries, indicating the disambiguation process.

Verb Similarity

Yang&Powers (2006)

- 130 English verb pairs (EN–EN); six human raters annotating

0: not at all related
1: vaguely related
2: indirectly related
3: strongly related
4: inseparably related

- Example: (approve, support) = 3 “*strongly related*”

**Goal: High correlation of
computational method with human raters**

Cross-lingual Verb Similarity

Publicly
available!

Three new verb similarity datasets

EN–EN (approve, support) = 3

1. Manually translate verb pairs

DE–DE (annehmen, unterstützen) = 3

2. Mix EN–EN and DE–DE

EN–DE (approve, unterstützen) = 3

DE–EN (annehmen, support) = 3

Evaluation Results

*Spearman's rank
correlation*

Take-Home Message

Multilingual, Sense-disambiguated Resource based on Wiktionary data

- Automatic disambiguation of semantic relations and translations
- Inference of new semantic relations
- Resource and evaluation datasets publicly available

Case study: Computing Verb Similarity

- Compete with expert-built wordnets in the monolingual setting
- Outperform Wikipedia and expert-built wordnets in the cross-lingual setting

Future work

- Integrate with other resources such as UBY, BabelNet,...
- Explore other disambiguation methods such as CQC

Thank you for your attention!
